

KYOVA Interstate Planning Commission has developed a well-rounded GIS system since the inception of the GIS program in 1999. KYOVA's GIS program covers all counties within the planning area which includes Cabell and Wayne counties in West Virginia, Boyd and Greenup counties in Kentucky, and Lawrence County, Ohio. The purpose of the GIS program is to provide support for various transportation projects and programs through data collection, analysis and evaluation. Through this program, KYOVA has been able to create a variety of maps and other visualization techniques for display to the public and local governments with map and data needs.

KYOVA maintains a current and historical inventory of transportation related data (i.e. land-use, population, employment, environmental justice, traffic counts, crash data, etc.) and maps for transportation planning and analysis. Such a database represents current conditions within the region and permits comparison to previous data as well as the ability to forecast periods to determine the impact of changing development and travel patterns.

ArcGIS 10.1 software is used to manipulate, update and query the databases that KYOVA maintains. Staff is always working to streamline analysis, display updated demographics and improve visualization techniques for future growth and stability for the region and the communities that lie within the boundaries of the MPO as the KYOVA GIS databases are gathered and maintained.

Please see the Multi-Media tab above for more interactive maps. Check back soon for new and updated maps.
